 Compatibility: Compatible with Iphone & iPad.
 Client: Bank Dhofar Saog
 Role: Software Developer

Description:

Access the the services without having to visit the branch or standing in queues. Such as account balance inquiry,statement,transfer fund,service request and so on all with added security and convenience.

Project 3:

Project Title: Timezone Games

Environment: Xcode 9.1
 Technology: AUDIO JACK CARD READER , NFC READER ,Content Management System,FB sdk google login sdk
 Compatibility: Compatible with iPad.
 Client: Timezone Entertainment Private Limited
 Role: Software Developer

Description:

This is about the world's leading fun family interactive entertainment centre that offers state of the art games, attractions and amusements. This application helps customers receive their cards once they get registered in Timezone app through google or Facebook app. The necessary credential data is stored in embedded server as well as global server. A two-way possibility using AUDIO JACK CARD READER and NFC READER is implemented for customers to enter the app where they can check their card balance, bonus, Ticket balance reward points transaction history and also customers can take surveys and feedback. This app is developed and designed to display the events and games offered by Timezone to customers where they can avail their card points to play and get entertained.

Project 4:

Project Title: Aloha Music

Environment: Xcode 8.2.1
 Technology: TCP Transmission Control Protocol, Content Management System (CMS)
 Compatibility: OSX(mac) and iPad.
 Client: Consulace Business Solution Pvt.Ltd
 Role: Software Developer

Description:

A musical store management control app is designed and implemented TCP Transmission Control Protocol for places like purpose like malls, supermarkets and so on. This project mainly deals with multiple business groups involving in the creation of Music Related Website and a Content Management System (CMS). Every business user handles the management system designed by the administrator. Songs, playlist, announcement, birthday wishes,

advertisement and many more categories of Music can be downloaded, scheduled and stored into local memory instantly by using TCP functionality from admin app. Many UI functionalities like volume sliders, seek bar, play/pause, next, previous, delete songs, playlist have been implemented based on instructions from admin app.

Project 5:

Project Title: Point of you

Environment: Xcode 8.0
Technology: Images stored in cache memory, Grand Central Dispatch
Compatibility: iPhone and iPad.
Client: POY Social Networking
Role: Software Developer

Description:

This project is about connecting brands with people who love photography by letting them share their photos with brands through easy-to-use frames. It is a collaboration of POY Social Networking Private Limited and a platform is created for posting photos, contents, co-create content, and promote it, which in turn provides an opportunity to be recognized and, gives them a chance to earn money off these photos. Table view is used for fetching data from database and stored in cache memory to access them easily for fast loading.

Project 6:

Project Title: Ziva

Environment: Xcode
Technology: Parallax ScrollView ,TCP
Compatibility: iPhone and iPad.
Client: Ziva Lifestyle India Pvt.Ltd
Role: Software Developer

Description:

Ziva is a beauty and wellness product that aims to provide premium salon based services through a mobile platform. The Ziva mobile application will allow consumers to choose between looks that have been curated by creative stylists and can have those looks delivered at a Salon near them. The idea is to provide premium services to customers who need those services immediately. The app will provide customers with the convenience of getting ready for events such as a cocktail party, a wedding engagement, a night out with friends or an interview at a premium salon in their neighbourhood.
